

Interested in learning how to keep your septic system functioning properly?

Attend the Homeowner Maintenance of Systems Course for Free!

This course covers the components of a conventional septic system and drainfield. Presentations provide a basic understanding of the operational and maintenance activities for a conventional septic system. The course explains how activities within the home can impact the operation of a septic system. This course will also explain the limitations of the site itself to accept and provide treatment to the wastewater. The participants will leave this class with a better understanding of the practices required to keep their system working and limit interferences with the enjoyment of their property.

Why Should You Attend?

An incentive for participating in the educational event, is that your septic system may be eligible for a **free** anaerobic septic system evaluation that will include pumping of your septic tank. An additional incentive for participants regarding the identification of a malfunctioning system is the eligibility of a **free** replacement system.

Galveston County Extension Office

5115 Highway 3

Dickenson, Texas 77539

Please RSVP to: 979-845-1395 or 979-458-4185

This is made possible by funding through the Clean Water Act Section 319(h) dollars provided through the Texas Commission on Environmental Quality (TCEQ). TCEQ has provided Texas AgriLife Research the funds to conduct reconnaissance, public outreach, inspect onsite sewage facilities (OSSFs), if needed pump primary septic tanks, and also if needed, replace failing OSSFs.
